MongoDB Restore Command (mongorestore)

This command is used to restore a MongoDB database from a backup folder using the 'mongorestore' tool.

Below is the full command:

Command:

```
/home/decodechamps/tools/mongodb-database-tools-rhel80-x86_64-100.9.4/bin/mongor
estore \
--uri="mongodb+srv://amazingtariqhabib:4wmETZf97F5Gp0bZ@abacusly.niwvw.mongodb.n
et/test?retryWrites=true&w=majority&appName=Abacusly" \
--dir="/home/decodechamps/public_html/node-backend/Abacusly-Jan-2023/db-backup-t
est/test" \
--drop
```

Explanation:

- mongorestore: MongoDB tool used to restore a database from a BSON backup.

- --uri: MongoDB connection URI including username, password, cluster, and database.

- --dir: Path to the directory containing the backup data (usually ends in the database name).

- --drop: Drops each collection before restoring it from the backup (to prevent duplicates).

Make sure the path and access permissions are correct when running the command.
